

Why this file exists. Lesson 2 is the product. Every line in the HeyGen script should either reduce shame, get them into one tool, or produce one useful answer. This sheet records what Facebook, Reddit, YouTube, Quora, LinkedIn, AARP, Pew, and competitor classes actually say — and what we changed in the script because of it.

Keep teaching one tool. Senior Planet's national class is a lecture covering ChatGPT *and* Gemini, plus privacy. Our edge is local, hands-on, one tool, one win. Do not add Copilot or Gemini in Week 1.

WHAT WE CHANGED IN THE VIDEO SCRIPT — AND WHY

ANGLE	WHAT THE SOCIALS / RESEARCH SAID	WHAT BARB NOW SAYS
You are not late	Quora's most-asked 50+ question is still "Is it too late to learn AI at 60?" Pew (Feb 2026): 77% of adults 65+ never use chatbots ; 58% of 50–64 never do. Substack/retiree writers: "You are not behind. You are in the majority."	"About three out of four adults 65 and older have never used a chatbot. You are not behind. You are right on time."
You already use a little AI	AARP: about half of 50+ use or want a voice assistant (Siri/Alexa). Family how-tos: "It's like Alexa, but it can hold a real conversation." Facebook/YouTube comments treat ChatGPT as a mysterious new species. Bridging from Siri lowers the leap.	Siri, Alexa, Google Maps, Netflix suggestions = a small piece of the same idea. This one can hold a conversation.
Google vs conversation	Dr. Margaret Sass (Boise State senior workshops): "Seniors get frustrated having to click through a dozen websites to find one answer. ChatGPT just gives you what you need right away." Senior blogs now teach an explicit Google vs ChatGPT table.	"Google hands you a stack of websites... This tool sits down and talks it through with you."
Stay logged out	OpenAI Help Center: try ChatGPT at chatgpt.com before creating an account. UI copy is often <i>Stay logged out</i> , not only "continue without an account." Guest chats are not saved.	Look for Stay logged out, or Continue without an account. Free account later if you want to save chats.
Voice / microphone	Family teaching guides and senior TikToks: typing on glass is the #1 friction. ChatGPT voice/mic is the Siri-like on-ramp. AARP interest in voice assistants is already high.	"If typing feels hard, look for a little microphone... You can speak your question instead."
Privacy in the same lesson	Pew non-users: 79% cite concern about how personal information will be used. 76% don't trust accuracy. AARP: 9 in 10 older adults worry about AI-powered scams. Do not wait until Week 2 for "don't paste your SSN."	One line in 2a: no Social Security number, bank numbers, or passwords. Full scams lesson still Week 2.
Starter prompt is 50+, not 65	Two audiences on LinkedIn/Reddit: retired 65+ (family gap, isolation) and working 50–62 (job/AI training gap). AARP: 49% of workers 50+ want AI training; only 12% get it. Employed 50+ are twice as likely to have used gen AI (42% vs 21%).	"I am over 50 and new to AI..." plus "add a letter, a trip, a recipe, or a job task."
Insurance letter, not a meds diagnosis	Socials and senior blogs: first wins are letters, recipes, HOA/insurance in plain English, birthday notes, trip plans. Health is a top <i>interest</i> and a top <i>risk</i> . AARP: they want AI to make life manageable, not replace a human. Keep "ask your doctor" — don't make a medication explanation the hero story.	Hero story: 72-year-old, Austin library, insurance letter in plain English. Follow-up line: "What should I check with a real person before I use this?"

ANGLE	WHAT THE SOCIALS / RESEARCH SAID	WHAT BARB NOW SAYS
Human stays in charge	AARP job-of-AI survey: high interest in translation, simplifying info, home monitoring; pull-back when AI replaces a human. Dr. Sass: AI should never replace human interaction. Don't sell companionship as the product.	"It is extra help. It is not a replacement for your doctor, your family, or a real friend."

WHAT WE KEPT (ALREADY MATCHED THE SOCIALS)

- **"That was it?"** — same reaction Dr. Sass reports: fear → curiosity the moment they see a real answer.
- **Conversation partner + taxi-driver context** — Senior Planet's own prompt drill is Task / Context / Format. Specificity is the whole game.
- **Follow-up as the power skill** — every competitor guide now teaches "make it shorter / explain simply." We already had this. We added one verification follow-up.
- **No wrong question / doesn't judge you** — Quora/Facebook pain phrase: "I feel stupid when I try." Shame is the barrier, not IQ.
- **One tool, chatgpt.com, free first session** — still correct. ChatGPT is the #1 chatbot in every age group (Pew 2026).

HOW WE COMPARE (DO NOT TEACH THIS TABLE IN CLASS)

PROGRAM / TOOL	WHAT THEY DO	OUR ANGLE
Senior Planet / OATS from AARP	National Zoom lectures. 10 AI classes funded by a \$450k OpenAI + Microsoft grant. "Intro to Chatting with AI" covers ChatGPT and Gemini, prompt writing, privacy. 276k interactions in 2024.	We are the local, in-person, one-tool version they cannot be. Same first skill (ask → follow-up), smaller room, Austin libraries, Spanish-ready later.
AARP + OpenAI partnership	Validates the market at national scale. AARP gen-AI use among 50+: 9% (2023) → 18% (2024) → 30% (2025).	Adoption is doubling. Most still have not started. Week 1 is the on-ramp, not a theory class.
Google Search	Links. Clicking. Ads. Fine for a known website.	ChatGPT is for explanation, writing, and back-and-forth. Use both. Don't say it "replaces Google."
Siri / Alexa	Short commands: weather, timers, music. Half of 50+ already use or want this.	Same voice habit, longer conversation. Mic button is the bridge.
Gemini / Copilot	Pew 65+: ChatGPT 19%, Gemini 11%, Copilot 10%. Senior Planet teaches all three. "AI for seniors 2026" roundups say: ChatGPT for writing, Gemini if they live in Gmail, Copilot if they live in Windows.	Pick one for the cohort. ChatGPT is the default. If a library PC is locked to Edge, Copilot is the fallback — still one tool.
Ask Grace / Granny-AI / Skales	Senior-only chat UIs: big type, voice, built-in medical/scam warnings.	Don't send learners to a new niche app in Week 1. Teach the tool their grandkids already name.
The Wisdom Project (6-week senior AI course)	Week 1 is theory + safety checklist before they chat.	We invert that: one win first, scams next week. Matches "if they leave with one useful answer, Week 1 succeeded."

SOCIALS — PAIN PHRASES AND FIRST-WIN LANGUAGE

Facebook

Reddit

YouTube

Quora

LinkedIn

AARP forums

- **Facebook / retirement groups:** "This morning I went to a free workshop learning about Chat GPT... What you can do with it will blow your mind... especially people who are retired." First-win posts are letters, recipes, trip plans — not "what is a large language model."
- **Reddit / Quora:** "Is it too late at 60?" "I feel a bit foolish." Ageism thread: "they're just lazy." Success stories: 67-year-old teacher writing children's stories; 60-year-old consultant adding AI to his rates. Core fear is permission, not steps.
- **YouTube (Mittler Senior Technology and similar):** Nobody said "I learned a new skill." They said "changed my life," "just having someone explain these things," "narrowed the generation gap." Product = confidence and reconnection.
- **LinkedIn:** 55+ workers leaving AI-exposed jobs; 49% want training / 12% get it; LinkedIn Learning age gap collapsed from 13.5 points to 1.6 when access exists. Working 50+ need a job-task example, not only grandkids.
- **AARP community:** "Befuddled after a software update." Trust, privacy, and ease of use beat "how the model works." 3 in 5 say tech is not designed with their age in mind.

NUMBERS YOU CAN QUOTE TO PARTNERS (NOT IN THE VIDEO)

CLAIM	NUMBER	SOURCE
65+ who never use a chatbot	77%	Pew, Feb 2026
50–64 who never use a chatbot	58%	Pew, Feb 2026
ChatGPT use, age 65+	19%	Pew, Feb 2026
Very/extremely confident using chatbots, 65+	6%	Pew, Feb 2026
Gen AI use among 50+	9% → 18% → 30% (2023–25)	AARP Tech Trends
Workers 50+ who want AI training vs who got it	49% vs 12%	AARP Foresight 50+, 2025–26
50+ who say tech is not designed for their age	~60%	AARP Tech Trends 2026
Smartphone ownership, 50+	90%	AARP Tech Trends 2026
