

Monetization, program design, and the gap between the current course and the new spine

This packet is the printed record of the Learn More Technologies strategy conversations: who should pay, what the Digital Pioneer Core should contain, and what to change in the existing 6-week course. It is a planning document, not a learner workbook.

1. Monetization — who pays, and for what

The money is not in selling courses to adults 50+. It is in selling **access, proof, and delivery** to organizations that need that audience: employers, workforce boards, libraries, and brands.

Learn More Technologies already has the hard parts: Austin delivery footprint, a free WIOA-aligned curriculum, MBE certification, a founder story, and a clear market claim (\$76T wealth, almost no ad spend). What is missing is a paid product ladder that matches that positioning. Public prices (\$500 keynotes, \$1,500 cohorts, “from \$5,000” brand work) sit below the value of the problem described on the site.

WHO SHOULD PAY

BUYER	WHY THEY PAY	WHAT THEY BUY
Workforce boards / AJCs	WIOA Title I, ITAs, digital literacy mandates	Eligible training + documentation
Employers / HR / DEI	Retention, ageism risk, AI upskilling	On-site cohorts + outcomes reports
Libraries, senior centers, CBOs	Mission + grant reporting	Site license or facilitated program
Brands / agencies	Reach the 50+ affluent market	Insight, audits, community access
Conference / association buyers	Fill a stage with a distinct talk	Keynote that becomes a training deal
Adults 50+ (secondary)	Confidence, community, coaching	Low-price membership — not the core P&L

Keep the flagship course **free to learners**. Charge the institutions that need completions, certificates, and a community they cannot fake.

1. **Make WIOA / ETPL the revenue engine.** Finish ETPL or equivalent board contracting. Sell a packaged ITA offer: workshop, multi-session cohort, and documentation bundle. Compete on completion rate, 50+ design, and bilingual delivery — not on cheap.
2. **Stop selling \$1,500 “cohorts.” Sell an annual workforce program.** Example SKUs: 90-minute pilot; standard cohort \$7,500–\$15,000; multi-site / quarterly retainers \$25,000–\$60,000 / year; branded portal as an add-on.
3. **White-label / site-license the curriculum.** Facilitator kit, slides, workbooks, completion tracking, train-the-trainer. Site fee + per-learner or annual license. This is how a one-person delivery model becomes a company.
4. **Brand advisory as a retainer, not a one-off audit.** “From \$5,000” is an entry audit. The real product is ongoing 50+ fluency plus paid, consented Pioneer research access. Use MBE in RFPs, not only on the homepage.
5. **Sponsored community programs, not ads on the free course.** Banks, hospitals, insurers, retailers pay to be the named sponsor of a library series. Sponsor the program, not the lesson. One bad affiliate would wreck trust.
6. **Launch Digital Pioneer Membership as a sidecar.** \$27/month is the right consumer price and the wrong center of gravity. Cap founder time. The free course remains the funnel.
7. **Raise speaking fees; treat the stage as pipeline.** Floor around \$5,000–\$10,000 plus travel. Every keynote has a next step: diagnostic, cohort, or brand briefing.
8. **Grants as fuel, not identity.** Use philanthropy to cover free community seats. Contracts pay the company.
9. **Productize proof.** Annual 50+ AI Readiness / Brand Ageism report, a short paid agency briefing, and a standard outcomes one-pager for procurement.

Do not

- ✗ Put the P&L on course sales to individual 50+ learners
- ✗ Affiliate-sell gold, crypto, or “AI side hustles”
- ✗ Keep three public price lists (\$500 vs \$1,500 vs \$2,500 / \$5,000)
- ✗ Scale by cloning Brian — scale by licensing + facilitators
- ✗ Pitch “we run your ads”

Do next

- ✓ One public offer sheet with three paid SKUs and one free funnel
- ✓ ETPL / workforce-board contracting in Texas
- ✓ Sell the annual program, not the \$1,500 pilot as the end state
- ✓ Train-the-trainer so library partners can run without Brian in the room
- ✓ Open membership only after the B2B calendar is booked

Positioning: Institutions pay for outcomes. Sponsors pay for trusted access. Learners get a free start and an optional membership. The \$76 trillion argument only works if the invoice matches it.

2. Program and course structure — Digital Pioneer Core

The program and the course should be **one curriculum, three delivery modes**. Adults 50+ finish courses when every session produces one win on their own device.

LAYER	WHAT IT IS	WHY IT EXISTS
Program	Cohort, facilitator, attendance, pre/post survey, certificate, Pioneer profile	What libraries, employers, and WIOA boards buy
Course	6 modules + capstone	What the learner actually does
Pathway add-ons	Job search, workplace AI, health, small business	What you customize after the core

THREE DELIVERY MODES — SAME CONTENT

MODE	FORMAT	WHO IT IS FOR
Self-paced	20–30 min lessons. Start in 20 minutes. Certificate on completion.	Free funnel / online learners
Community cohort	6 weeks × 2 hours = 12 hours. 10–15 people. Peer facilitator.	Libraries and senior centers
Workforce cohort	4–6 weeks. Up to 20 people. Same core, workplace labs swapped in.	Employers and WIOA boards

COURSE MAP

Theme: use AI and everyday tech to stay independent, safe, and useful. Not “how computers work.” Not prompt engineering.

#	MODULE	LEARNER JOB	THEY LEAVE ABLE TO...
0	Welcome (30 min)	This is for me	Sign in, set one goal, complete the pre-survey
1	Talk to AI	Get help without feeling stupid	Use one AI tool to answer a real question
2	Don't get scammed	Stay safe in an AI world	Spot phishing and fake media; lock down passwords and 2FA
3	Stay connected	Use tech for people, not apps	Send a clear message, make a video call, draft a note with AI
4	Health & independence	Run your life online	Open a portal, refill a prescription, prepare for telehealth; verify AI answers
5	Money & work (fork)	Don't get left behind	Safer banking <i>or</i> job search <i>or</i> workplace email/docs with AI
6	Your next chapter	Prove it	15-minute capstone + certificate + Pioneer story

Week 5 fork: Community → bills and banking safety. Job seekers / WIOA → resume and interview practice. Employer → Outlook, Teams, Excel, CRM.

LIVE SESSION SCRIPT — 110 MINUTES

1. **Arrive and settle (10)** — names, what worked last week, devices on
2. **One story, one rule (10)** — why this matters at 50+; no theory dump
3. **I do (15)** — facilitator demos slowly on a big screen
4. **We do (25)** — class does the same steps together
5. **You do (30)** — they complete it on their phone or laptop
6. **Save the win (10)** — write the steps on a one-page take-home card
7. **Confidence check (10)** — 3-question exit slip + next week preview

Self-paced version of the same module: 6–8 minute captioned video (EN/ES), click-along checklist, one practice task, “did it work?” checkbox, optional office-hours replay. Always include a printed one-pager, an 8-word glossary, a “stop if this happens” box, and a WIOA attendance checkbox.

6-WEEK COMMUNITY COHORT

WEEK	IN THE ROOM	TAKE-HOME
1	Welcome + Talk to AI	Use AI once for a real question
2	Scams & accounts	Turn on 2FA; review one suspicious email
3	Messages & video call	Call one person; send one AI-drafted note
4	Health / independence	Open a portal or prepare 3 visit questions
5	Money or work (fork)	One job/life task with AI + a human check
6	Capstone + certificate	Pioneer story (optional photo/quote release)

PROGRAM WRAPPER — WHAT BOARDS AND HR BUY

1. Intake: device type, language (EN/ES), goal (family / health / job / work)
2. Pre-survey: confidence, scam awareness, one “I cannot do this yet” item
3. 6 sessions + makeup path (missed class = self-paced lesson + 15-minute check-in)
4. Post-survey + certificate (name, hours, modules, date)
5. Outcomes one-pager for the host (attendance, confidence change, 3 quotes)
6. Pioneer next step: gallery nomination, membership, or job-search office hours

Pedagogy rules

- ✓ One tool per module
- ✓ Their device, not a lab PC
- ✓ Same 5 steps, three times
- ✓ Shame-free language — never “even grandma”
- ✓ Verify, don’t worship the model
- ✓ Bilingual by design
- ✓ Peer facilitator script so Brian is not the only teacher
- ✓ ~18 lessons total, not 40

Leave out of the core

- ✗ How the internet or LLMs work
- ✗ Coding or “become an AI engineer”
- ✗ Ten apps in one day
- ✗ Crypto, gold, or side-hustle schemes
- ✗ Medical or legal advice from the AI
- ✗ A fourth curriculum per buyer

Monetization fit of the course: Free self-paced unlocks Modules 0–2. Certificate + Modules 3–6 run in a cohort or membership. Employer SKU = Core + Workplace AI fork + outcomes report. WIOA SKU = Core + Job Search fork + attendance/ITA packet. If you only build one thing next: six identical module templates, one week-5 fork, and the session script.

3. Gap analysis — current course vs new spine

You already have the **container** right (6 weeks, 12 hours, peer facilitator, libraries). What does not match is the **inside of the weeks** — and two different courses are being described in public.

Partner / GitHub pages still sell: smartphones, internet safety, telehealth, video calling, online services.
learnmoretechnologies.com sells: AI Fundamentals, Career & Job Search, Finance & Safety, Health / Independence / Business. The new structure is how you make them one.

SIDE-BY-SIDE

	WHAT YOU HAVE NOW	SUGGESTED DIGITAL PIONEER CORE
Length	6 weeks × 2 hours = 12 hours	Keep this
Group	10–15 people, peer facilitator	Keep this
Start point	“Never touched a smartphone”	One goal + 20-minute AI win; device help inside the lesson
Week 1	Smartphones & tablets	Welcome + Talk to AI
Week 2	Online safety / scams	Don’t get scammed (add AI fakes, voice clones)
Week 3	Video calling	Stay connected (call + AI-drafted message)
Week 4	Telehealth & portals	Health & independence (same labs + verify the AI)
Week 5	Online banking / finances	Money or work or workplace tools (one fork)
Week 6	Social media / leftover topics	Capstone + certificate + Pioneer story
AI	Promised on LMT.com; not the weekly spine in the repo	Module 1, then used in every later week
Session shape	Ops checklists (sign-in, photos, grants)	I do / We do / You do + take-home + confidence check

KEEP — DO NOT REBUILD

6-week 12-hour cohort; small group + peer facilitator; library / senior-center delivery; shame-free slow practical tone; life jobs (family, health, money, safety); sign-in / photo release / instructor package; certificate + community after; English / Spanish intent; printed take-homes. The suggestion is a rewrite of week titles and labs, not a new organization.

WHAT TO CHANGE

1. **Pick one public outline.** Publish the six Pioneer modules everywhere.
2. **Move “how to use a phone” out of Week 1.** Keep 10–15 minutes of device setup inside every session. A whole week on the phone keeps employers and advanced 50+ learners out.
3. **Make Week 1 an AI win.** End state: they asked one real question and got a useful answer.
4. **Upgrade Week 2 to AI-era scams.** Keep passwords and 2FA. Add fake grandchild voice, fake photos, fake invoices.
5. **Give Week 5 a fork.** Three labs, one per cohort type: banking; resume/interview; workplace tools.
6. **Turn Week 6 into a finish line.** One personal project, certificate, optional Pioneer story. AACME already wants a showcase — this is that, every cohort.
7. **Write one session script and use it every week.** Instructor package is strong on ops, thin on teaching.
8. **Add a 10-minute Welcome / pre-survey.** Lock a goal and a confidence score. WIOA and employer buyers need pre/post.
9. **Decide what stays free.** Community cohort can stay free. Use the same modules for paid employer / WIOA / membership. Stop implying there is only one offer.

STILL NEED TO BUILD

NEED	YOU HAVE NOW	CHANGE
One official module list	Two conflicting lists	Publish the 6 Pioneer modules
Week-by-week facilitator script	Topic line on the sign-in sheet	One script + 6 one-pagers
Standard lesson template	Slides/workbooks claimed, not standardized	Video + checklist + practice + "stop if..." box
Week 5 forks	One banking week	3 lab versions
Capstone	Informal stories / AACME showcase	Every cohort ends with a 15-minute win
Pre/post survey	Attendance + testimonials	Confidence + "I can do X now"
Outcomes one-pager	Quarterly partner reports	Same one-pager after every paid cohort
Self-paced = live	Described separately	Same 18 lessons, two clocks
Tool rule	Multiple apps implied	One AI tool per cohort

Short version: You have a good 6-week community program built as digital literacy. The suggestion is the same 6 weeks, rebuilt as AI-assisted independence. Change the spine from *Phone* → *Safety* → *Zoom* → *Doctor* → *Bank* → *Social* to *AI win* → *AI-era safety* → *People* → *Health* → *Money/Work (fork)* → *Prove it*. Keep the room, the 12 hours, the peer facilitator, and the forms. Rewrite the week titles, put one AI action in every session, add the teaching script and the Week 5 fork. That is the whole gap.

4. How to print / save this packet

Open this HTML in a browser and click **Print / Save as PDF**, or use the generated PDF in this folder: **forms/lmt-strategy-conversations.pdf**.

On Windows, to drop the PDF on your Desktop:

```
Invoke-WebRequest -Uri "https://github.com/1Profmac/1Profmac.github.io/raw/cursor/powershell-list-files-c07c/forms/lmt-strategy-conversations.pdf" -OutFile "$env:USERPROFILE\Desktop\lmt-strategy-conversations.pdf"
```
