

Learn More Technologies — Concept Probability Analysis

FY27–FY29 funding brief · 50+ adult services · Compared with three alternative concepts · September 2026

Confidential

Is a 50+ AI-services company *the right bet* for the next three years?

This brief scores the Pioneer Model (LMT / 50+TechBridge) against three other ways to serve adults 50+, estimates profit potential through FY29, and names the dates at which Brian should stay the course or make a hard pivot. It is written for a funding conversation, not as a learner or grant narrative. Locked public language only: 9 in-person locations in central Texas; 6 Austin Public Library branches; AARP-affiliated senior centers; Foundation Communities veterans program; WIOA-eligible; MBE-certified. Market facts: \$18K/worker (LSE & Protiviti); \$850B ageism cost (AARP & Oxford Economics).

NEED ALIGNMENT

Yes — stay in 50+

Demand for 50+ AI fluency is rising. Do not pivot off the demographic.

3-YEAR PROFIT (BASE)

\$155–275k base

FY27–FY29 contribution after delivery cost, before founder market salary. Probability ~40%.

HARD-PIVOT CLOCK

Month 12 / 18

No paid institutional contract by month 12, or still 100% Brian-delivered by month 18.

1. Is this in line with projected future needs?

Yes. The demographic, the labor market, and the AgeTech category all move toward LMT's customer — with one important caveat: most AgeTech *capital* is chasing clinical care, not workforce training. That is a funding-mix problem, not a demand problem.

WHAT THE NEXT THREE YEARS ACTUALLY REQUIRE

- **More 50–74 year-olds will still be working.** BLS projects U.S. labor-force participation for ages 55–64 to rise from 65.9% (2024) to 68.6% (2034), and for 65–74 from 27.1% to 29.6%. The workforce is getting older, not younger. BLS Employment Projections Table 3.3
- **AI is already pushing 55+ workers out of exposed jobs.** Post-ChatGPT, workers 55+ in AI-exposed occupations leave work more often (unemployment and “voluntary” exits). Upskilling is no longer a nice-to-have; it is how this cohort stays employed. Center for Retirement Research / Sanzenbacher 2026; CNBC Jul 2026
- **Ageism is a priced cost, not a slogan.** \$850B/year (AARP & Oxford Economics). \$18K per worker (LSE & Protiviti). Employers and boards can put a number on inaction.
- **AgeTech is a \$286B global market in 2026, growing ~10.4% real CAGR through 2031.** Lifelong learning is a large established segment; fraud-protection and cognitive tools are the faster growers (15–17%). LMT sits at learning + fraud (Week 2 scams) + workforce — not in wearables. SilverEconomy AgeTech Market Report 2026
- **Where the money is concentrating:** AI-in-aging-and-elderly-care is forecast ~\$68B (2026) → ~\$158B (2030), ~24% CAGR. That is clinical/care tech. LMT should **not** try to become that company. It should sell training, documentation, and trusted access to the institutions that already buy those outcomes (boards, employers, libraries, insurers). The Business Research Company / Research and Markets 2026

Funder one-liner: The 50+ adult is not a niche. It is the labor-force story of 2027–2029. Almost nobody is selling WIOA-eligible, in-person AI training designed for that adult. That gap is the company.

2. Four concepts — score the bet

Compare LMT's Pioneer Model with the three other ways capital usually "does 50+." Scores are for **this founder, this footprint, a 36-month profit clock** — not for who wins the decade.

	A. PIONEER MODEL (LMT)	B. LIVE-CLASS PLATFORM (GETSETUP-CLASS)	C. PHILANTHROPY LITERACY (SENIOR PLANET / OATS-CLASS)	D. CLINICAL AGETECH (AI ELDERCARE)
What it is	B2B/gov AI fluency. Free learner funnel. Paid institutions. In-person + gallery + podcast + stage.	Peer-to-peer live classes for 65+. Payers: states and health plans. Consumer fees weak.	Nonprofit digital literacy, AARP-adjacent, grant/philanthropy P&L.	Wearables, remote monitoring, care robots. Where AgeTech VC goes.
Who pays	Workforce boards, employers, libraries, conferences, later Barb licenses.	~80% government / ~20% healthcare in the Stanford case. Not the 65+ user.	Foundations, AARP, municipal digital-equity grants.	Health systems, CMS-adjacent, insurers, families.
Demand 2027–29	High and rising (AI displacement + older LFPR).	High, but wellness/prevention is first cut in budget crunches.	Stable mission demand. Not a profit story.	Highest dollar demand in AgeTech.
Unit economics	Good <i>if</i> priced as cohort/retainer (\$7.5–60k), not \$1.5k "workshops." Gross margin 45–60% once a facilitator exists.	Hard. GetSetUp reached millions of users and stayed near breakeven. Institutional sales cycles vs 8–10 year value.	Not designed to produce owner profit.	Can be venture-scale. Requires product, FDA/HIPAA, and a different team.
Capital need	Low-moderate. Fuel is contracts + one facilitator + ETPL. Not a Series A hardware build.	High (platform, instructors, 32-state sales).	Continuous fundraising.	Very high.
Fit to Brian / LMT assets	Best. 9 locations, 6 APL, MBE, WIOA, AARP background, AGENTIC50, Gallery.	Partial (community + classes) but you become a content platform, not a contract shop.	Tempting via 501(c)(3). Turns the company into a grant shop.	Poor. Different science, buyers, and risk.
3-yr profit odds	Highest of the four for this founder. Base ~40% of a modest positive contribution; upside 15%.	Low without a new payer model. Stanford case: stay / new model / Asia / sell.	Near zero as a for-profit. Fine as a program inside a nonprofit.	Near zero <i>for LMT</i> . High for a different company.
Verdict	Stay. This is the concept.	Do not copy. Steal one lesson: institutions pay, users don't.	Use 501(c)(3) as a seat-subsidy sidecar — never as the operating company.	Do not pivot here. Partner later (Barb in a health plan) instead of rebuilding.

Why A beats B even though B is bigger: GetSetUp proved demand and proved that *scale without priced institutional SKUs still does not print profit*. LMT is smaller and should stay smaller-on-purpose until ETPL + retainers exist. The Pioneer Model is GetSetUp's lesson applied early: do not put the P&L on the 50+ learner.

3. Three-year profit potential — Pioneer Model only

Assumptions from LMT's own offer architecture (not consumer course sales): 90-minute pilot as the door; community/employer cohort \$7,500–\$15,000; annual program \$25,000–\$60,000; keynote floor \$5,000; site license after a facilitator exists; Barb as a year-2/3 add-on. Grants (Elevate, Nexus-class) are **restricted fuel**, not operating profit. Figures are **contribution after delivery cost** (facilitator, materials, travel, software) and **before** paying Brian a market CEO salary. Texas ITA caps are set by local boards (commonly roughly \$7k–\$9k per participant in many regions; confirm per board) — cohort pricing must sit inside that envelope once ETPL is live.

	CONSERVATIVE (35%)	BASE (40%)	UPSIDE (15%)
FY27 (next 12 mo)	Revenue \$45–70k. 4–6 pilots, 1–2 paid cohorts, 1–2 keynotes. ETPL submitted, not yet producing. Contribution ~\$0 to \$15k. Founder is the delivery.	Revenue \$90–130k. 6 pilots, 4 cohorts, 3 keynotes, Elevate if awarded (restricted). Contribution ~\$15–35k. One named facilitator in hiring.	Revenue \$160–220k. First board or employer retainer signed. 6+ cohorts. Contribution ~\$40–70k.
FY28	Revenue \$90–140k. Still founder-heavy. 1 site license. Contribution ~\$15–30k.	Revenue \$220–320k. ETPL live at 1–2 boards. 1 facilitator. 2 annual programs + licenses. Barb one pilot. Contribution ~\$50–90k.	Revenue \$450–650k. 3+ boards or multi-site employer. 2 facilitators. Barb licenses. Contribution ~\$120–200k.
FY29	Revenue \$140–200k. Livable but not a fundable scale story. Contribution ~\$30–50k.	Revenue \$400–550k. Repeat retainers, train-the-trainer, 6–8 keynotes as pipeline. Contribution ~\$90–150k.	Revenue \$800k–\$1.2M. Multi-state licenses + speaking that converts. Contribution ~\$200–350k.
3-yr cumulative contribution	~\$45–95k	~\$155–275k · midpoint used on cover: ~\$90k if FY27 is slow, ~\$220k if base hits	~\$360–620k
What has to be true	Brian remains the product. No ETPL, or ETPL unused. Libraries as in-kind venues only.	ETPL or equivalent board contract. One facilitator. Unified ITA-range price list. 2 proposal conversations / week held.	Base, plus 1 employer or health-adjacent Barb license, plus \$5k+ keynotes actually booked.

A remaining ~10% is the **miss**: no institutional buyer by month 18, prices still at hobbyist levels, or the calendar is all unpaid community sessions. That path is a lifestyle teaching practice, not a fundable company.

Read this the way a funder will: This is not a \$10M venture path in 36 months. It is a contract shop that can become a licensing company. Ask for operating capital that buys a facilitator, SAM/ETPL, and 90 days of unpaid sales time — not a platform rebuild. If a funder needs 10× venture returns, they are the wrong funder for Concept A. They should be looking at Concept D, with a different founder.

4. Strategy — 36 months if we stay the course

FY27 — UNLOCK THE BUYER (MONTHS 1–12)

1. Unify public prices to ITA-range SKUs: Pilot / Cohort / Annual. Kill \$500 and \$1,500 as public headline prices.
2. Submit / confirm ETPL. SAM.gov + UEI. One-page capability statement. Named facilitator (even part-time).
3. Sell the 90-minute pilot weekly. Convert 1 in 3 pilots to a 6-week cohort.
4. Two proposal conversations per week with boards, SHRM/HR, library systems, and one healthcare or insurer for a future Barb conversation — not a build.
5. AGENTIC50 guest pattern: Pioneer → Buyer → Peer. Book 3 buyer guests who chair rooms you need.
6. Gallery Oct–Dec 2026 as proof, not as the P&L. File one outcomes one-pager.

FY28 — STOP BEING A SOLO DELIVERY BUSINESS (MONTHS 13–24)

1. Facilitator runs community cohorts. Brian runs employer/WIOA and keynotes only.
2. Site-license the kit to 2–3 additional locations (train-the-trainer).
3. One Barb white-label pilot (library or healthcare) — no new product, a contract on what already exists.
4. 501(c)(3), if approved, funds *free seats*. The LLC still invoices institutions.

FY29 — LICENSE + STAGE (MONTHS 25–36)

1. Repeat retainers. Out-of-region licenses. Keynote floor held at \$5k+.
2. Do not launch a consumer membership as the center of gravity. \$27/mo is a sidecar after B2B is booked.

5. Hard pivot vs stay the course — the clock

Do **not** pivot off adults 50+. Pivot the *offer and the payer* if the clock below trips. Dates are from September 2026.

Stay the course when all of these are true

- At least one paid institutional invoice (employer, board, library system, or sponsor) by **month 9**.
- ETPL submitted by **month 6**; in conversation with a board by **month 12**.
- A named facilitator exists (even contract) by **month 6**.
- Public prices no longer conflict; ITA-range SKUs are the only list.
- Pilot → cohort conversion is happening (even 1 of 4).
- Speaking inquiries include a next-step cohort, not only a \$500 talk.

Hard-pivot triggers — do not wait for “one more grant”

- **Month 12:** Zero paid institutional contracts AND ETPL not submitted. The concept is untested, not “early.”
- **Month 18:** ETPL rejected twice *and* no employer/library paid program. Boards will not be the engine. Pivot payer to employer retainers + site licenses only, or to sponsored library series — not to consumer courses.
- **Month 18:** Brian is still 100% of delivery. The company cannot be funded; it is a practice. Hire, license, or stop claiming scale.
- **Any time:** Consumer membership or affiliate “AI side hustle” exceeds ~25% of revenue. That is a different, worse company. Kill it.
- **Do not:** Pivot into clinical AgeTech, adtech, or “we run your ads.” Wrong assets.

Allowed “soft pivots” (not concept changes): (1) If WIOA is slow, overweight employer/HR and library-system contracts. (2) If in-person stalls, overweight site license + Barb. (3) If Texas boards stall, take the same SKU to another state’s board that already lists digital-literacy ITAs. The customer is still 50+. The invoice is still an institution.

6. What to tell a funder in 90 seconds

1. **The need is not speculative.** Older participation is rising, AI is ejecting 55+ workers from exposed jobs, and ageism is a \$850B / \$18K-per-worker cost.
2. **Most AgeTech money is in care tech. We are not that.** We sell WIOA-eligible, MBE-certified AI training and proof, delivered at 9 in-person central Texas locations (6 APL branches, AARP-affiliated senior centers, Foundation Communities veterans program).
3. **Compared with GetSetUp-class platforms, philanthropy literacy, and clinical AgeTech,** this is the only concept that matches this founder’s assets and can produce profit in 36 months without a hardware stack.
4. **Base case:** low-six-figures revenue by FY29, contribution in the \$90–150k year if ETPL + one facilitator land. Upside is licensing. Downside is a teaching practice.
5. **Use of funds:** facilitator, ETPL/SAM, capability statement, 90 days of sales. Not a new app.
6. **Kill criteria are dated.** Month 12 without an institutional invoice, or month 18 still solo-delivered, we change the payer mix or we stop calling it a company.

Recommendation: Stay the course on the 50+ demographic and the Pioneer Model. Raise against FY27 unlocks (ETPL, facilitator, first paid cohort). Re-forecast at month 12 with invoices in hand. Do not raise against a clinical AgeTech story or a consumer-app story.
